ChitChatChampion
Effortless Icebreakers for Any Occasion

Motivation

Our team started off with some simple observations: the awkward silences and boring introductions during ice-breaking sessions. When we organise team-building sessions, it is difficult to come up with interesting ice-breakers. Most end up going with classic games like "two truths one lie", while a select few may invest in board games. Armed with these insights on the difficulties in organising unique ice-breakers, our team has committed ourselves to enhancing the experience of creating and participating in ice-breakers.

Given the powers of Generative AI, our team decided to explore the following problem statement: How can we use AI technology to help users generate customised ice-breakers, effortlessly? We are proud to present you with our solution, **ChitChatChampion.**

About

ChitChatChampion is a web application that offers a series of engaging, customised games that are designed based on your needs. Our platform harnesses the potential of Large Language Models (LLMs), creating personalised content for each team-building session.

ChitChatChampion aims to facilitate engaging ice-breaker games and conversation starters for various social settings, with a focus on customisation and user interaction. Its objectives include fostering connections, breaking the ice, and making social gatherings more enjoyable through tailored ice-breaking activities. These activities are meant to be played in-person, with a phone or laptop as a companion to the activity.

Our product caters to a wide range of audiences, from a group of teens who are deciding what to play on party night, to professional organisers of corporate team-building events. By leveraging LLMs to generate game content, ChitChatChampion enables personalisation and customisability, while providing a hassle-free experience.
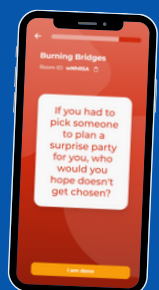

Features

For our MVP, ChitChatChampion offers three main game modes:

Conversation Starter Cards

These clever Conversation Starter Cards are the life of the party, sparking engaging discussions and hilarious anecdotes. Break the ice and keep the conversation flowing as you explore intriguing questions and prompts customised for your participants. It's the perfect recipe for memorable moments that will leave everyone talking long after the event.

Burning Bridges

Drawing inspiration from the riotous 'Burning Bridges' card game, our creation brings laughter, finger-pointing, and a touch of scandal to your gatherings. As our team carefully engineers prompts to match the scenario, the fun stays fiery. Revel in witty banter as you uncover which member of your group perfectly embodies these scandalous prompts, all in the name of crafting unforgettable, laughter-filled moments.

ChitChatChampion
Effortless Icebreakers for Any Occasion

Social Bingo

Inspired by the "Superheroes" bingo provided at the start of CS3216, Social Bingo turns every social gathering into a hilarious competition. Race to complete your bingo card by entering the name of the person that matches the description. By implementing this game mode, we hope to reduce the amount of paper and time spent designing questions. With this revolutionary, LLM-enhanced game mode, we provide personalised bingo squares for each and every participant, improving the excitement and interaction for all.

ChitChatChampion's Charms

1 Personalisation

Personalisation remains at the heart of ChitChatChampion. By harnessing Generative AI, hosts are able to customise the game based on known data of participants, allowing the games to be more relevant to the group. This extends beyond current solutions involving putting money into buying card games that are standardised, or putting effort and time into customising your own game.

2 Real-Time Technology

ChitChatChampion implements Websockets to allow real-time updates for our games. This feature is prominent among actions involving starting and ending the game room, or the implementation of the lobby for participants to wait for a game to start.

3 Smooth UI Integration

Our AI-generated prompts would not be complete without the seamless integration of gameplay mechanics with our app. ChitChatChampion features interactive frontend elements that enhance the user experience. This is not so easy to achieve with purely textual outputs and ChatGPT alone.

4 Future Developments

ChitChatChampion is designed to become a one-stop app for team-building games. Hence, our MVP leaves endless possibilities for future iterations by including many new game modes. This ensures scalability and adaptability: both of which are essential in developing a sustainable business from our product.

Conclusion

Overall, ChitChatChampion is about transforming the realm of generating ice-breakers by streamlining the process of creating games, all while ensuring personalisation and a smooth user experience. Our team believes in the potential of ChitChatChampion to become the future of ice-breakers, heralding a new era of introductions and social interactions. We invite you to experience the charm of ChitChatChampion first-hand and embrace its potential to enhance your social interactions and events.
